DAF Dissolved air flotation clarifies

ABOUT DAF

Dissolved air flotation (DAF) is a water treatment process that clarifies wastewaters (or other waters) by the removal of suspended matter such as oil or solids. The removal is achieved by dissolving air in the water or wastewater under pressure and then releasing the air at atmospheric pressure in a flotation tank basin. The released air forms tiny bubbles which adhere to the suspended matter causing the suspended matter to float to the surface of the water where it may then be removed by a skimming device.

APPLICATION

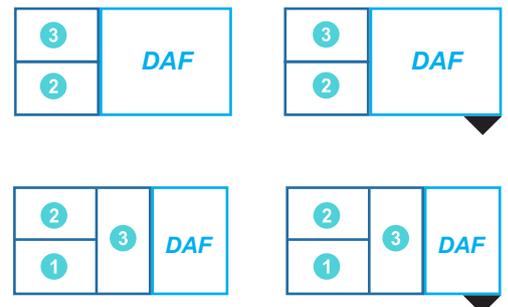

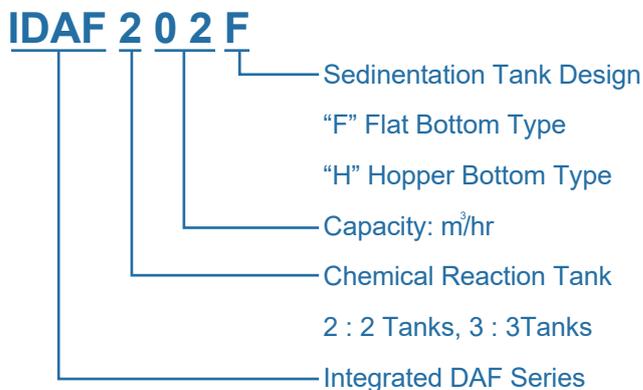

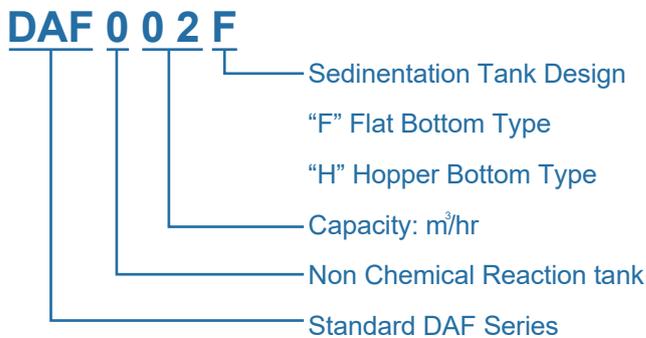

1. Separate or recycle waste oil or grease in high concentration organic wastewater treatment in paper, painting & dyeing, textile, leather, pharmaceutical industrial , etc ;
2. Biochemical effluent liquid / solid separation :
 - Anaerobic effluent solid /liquid separation ;
 - Aerobic (activated, sludge process, contact oxidation, filter) biochemical water solid /liquid Separation ;
 - The secondary settling tank effluent treatment ;
3. Farm and slaughter house of cattle, pigs, chickens farm waste water treatment ;
4. Electroplating, painting manufacturing waste water treatment ;
5. Domestic waste water treatment, water purification , etc ;

FEATURES

- Micro bubble generation technology.
- Forth circulation and flocculation technology.
- Compact package design which consisted flotation tank , air dissolving tank & recycle pump, froth removal skimmer (Standard DAF Series) and coagulation / flocculation mixing system (Integrated DAF Series), assembly in one unit , easy to installation and transportation .
- Hopper type sludge sedimentation bottom which no dead zone designed to make sludge discharge smoothly (Capacity 10m³/hr up).
- High operation stability and reliability , automatic froth layer removals solid content up to 3000mg/L .
- Provide varietal high corrosion resistant materials for main structure.
 - Carbon steel coated by bituminous paint
 - Carbon steel with FRP shell liner
 - Stainless steel SS304
- Integrated walking way assembly by high corrosion resistant material grating plate with carbon steel stair and handrail .
- Provide varietal standard connection flanges , such as JIS, DIN, GB, ANSI, etc.
- Standard control: On-site manual/automatic control, reserve remote operation, total fault signal (DCS), air floatation with low water level protection switch.
- Easy to up grade by custom control systems (PLC, HMI, SCADA or remote control).

MODEL DESCRIPTION

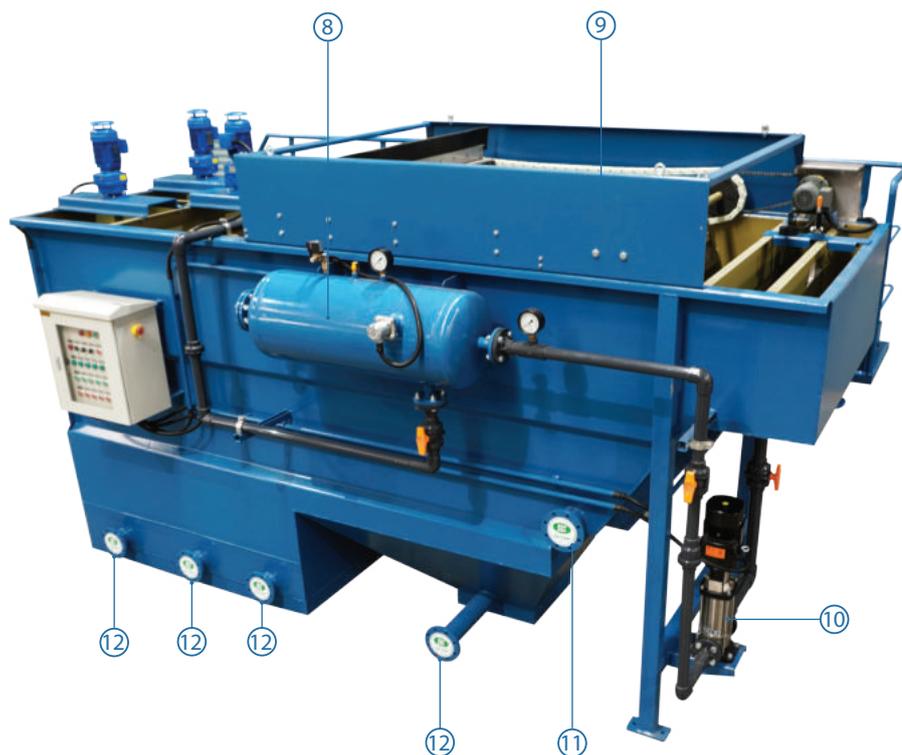

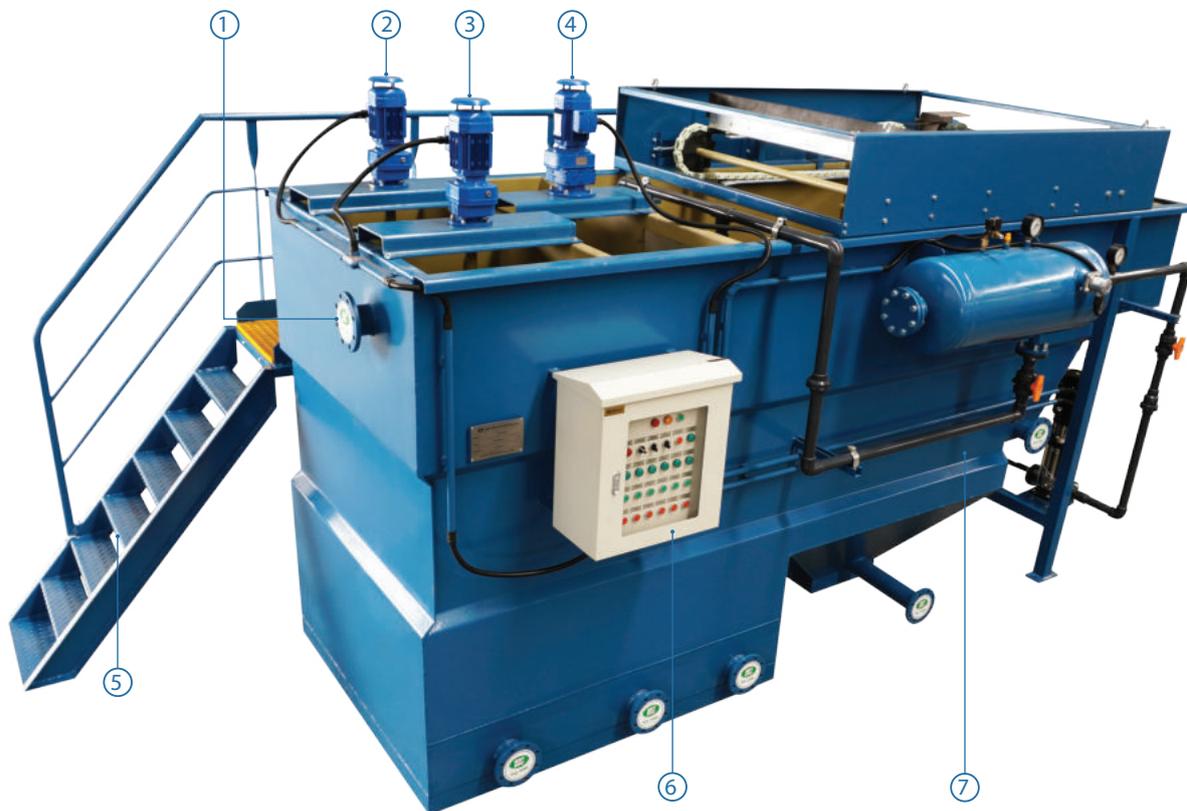

Remark:

- ① : PH Adjustment Tank;
- ② : Coagulation Tank;
- ③ : Flocculation Tank;

STRUCTURAL COMPOSITION (IDAF Series)

No.	Description
1	Waster Water inlet
2	Coaulation Tank & Mixer
3	PH adjustment Tank & Mixer
4	Flocculation Tank & Mixer
5	Walkway & Handrail
6	Control panel
7	Floation Tank
8	Air Disolved Tank
9	Skimmer System
10	Recycle Water Pump
11	Sludge Outlet
12	Drain Hole

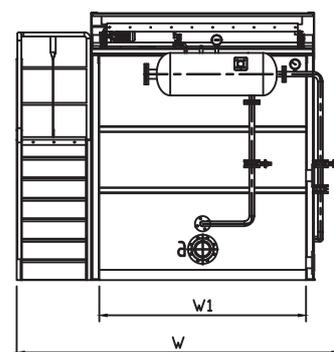

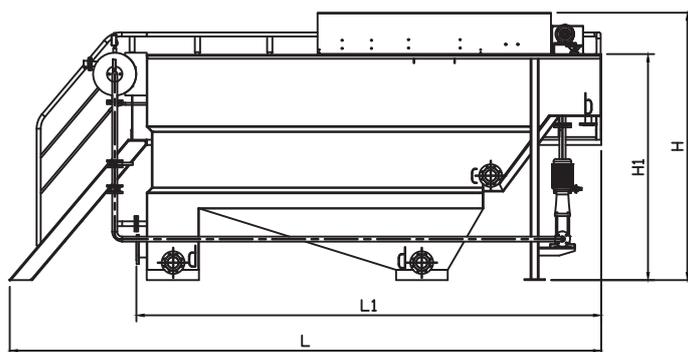

Technical specification

Model	Capacity (m ³ /hr)	skimmer		air-compressor		recirculation pump		Pump Type
		Q'ty	Power (Kw)	Q'ty	Power (Kw)	Q'ty	Power (Kw)
